

Build without a review avalanche

A three-page user guide for using the shard-checkpoints skill.

THE RULE

Keep most of the exposed shard polished and demo-ready. Build one small rough pocket or interaction at a time.

80 / 20 is a scope discipline, not a numerical quality score. Do not expose the next rough pocket until the current one has passed review and phone play.

WHAT MATTHEW DOES

Review one portrait target / before / current board and a short playable demo. Approve the slice or name the first thing that breaks the taste.

WHAT THE AGENT DOES

Create the visual options, build collision and controls, capture other angles, play through the slice, verify the real iPhone, and keep the project gates green.

One checkpoint from idea to pinned

Use the same loop for a world pocket, model, weapon or HUD interaction.

01 **Frame**

Choose one small slice and camera. Show an ambitious target and a plausible near-term game view.

02 **Inspect**

Check front, sides, back and three-quarter angles. Register used models in Model Explorer.

03 **Build**

Put it in the real world with controls and collision. Compare target, before and current.

04 **Play**

Walk or fight through it. Use World Explorer for placement and HUD Explorer for feedback.

05 **Pin**

Test the home-screen iPhone PWA and code gates. Ask one taste question, then deploy.

What a useful review actually looks like

One board, one playable link and one decision. The technical grids stay internal.

A USEFUL NOTE

"The target is wet and dense. The current frame is too bright near the floor. Keep the camera; darken only the ground."

This names one lever and preserves the already approved parts.

THE VERDICT

APPROVE - pin it. REVISE - say what reads wrong first. HOLD - the phone or play test fails.

No long form, variant maze or dozens of simultaneous toggles.

PROMPT THE SKILL

"Use shard-checkpoints on the next small pocket. Bring me a portrait target / before / current board, a playable link, the phone reading, and one decision."

If the slice is rough, keep polishing it before expanding.
