

Build a shard without a review avalanche

A three-page guide for Matthew. The skill is `.claude/skills/shard-checkpoints/SKILL.md`.

THE RULE

Keep most of the exposed shard polished and demo-ready. Work on only one small rough slice at a time. The 80 / 20 split is a scope rule, not a measured quality score.

PINNED / DEMO READY

ONE ACTIVE SLICE

MATTHEW CHOOSES TASTE

Approve or redirect one portrait comparison and a short playable demo.
Say what reads wrong first.

THE AGENT OWNS THE GRIND

Make the mockups, capture all angles, build the slice, test movement,
phone load and performance.

One checkpoint from idea to pinned

Use the same loop for a world pocket, model, weapon or HUD interaction.

01	Frame	Pick one small slice and one camera. Show a high-quality target beside a plausible near-term result.
02	Inspect	Review a model from front, sides, back and three-quarter angles. Register used models in Model Explorer.
03	Build	Put the slice in the playable world with collisions and controls. Compare target, before and current at the same pose.
04	Play	Walk or fight through it. Use World Explorer for seams and HUD/Weapon Explorer for first-person feedback.
05	Pin	Test the real iPhone PWA and project gates. Ask one taste question; pin and deploy only after approval.

What Matthew actually sees

One compact board, one playable link, one decision. The technical grids stay internal.

A USEFUL REVIEW NOTE

"The target reads wet and dense. The current frame is too bright near the floor. Keep the camera; darken only the ground."

This gives the agent one lever while preserving the approved parts.

A USEFUL VERDICT

APPROVE - pin the slice. REVISE - name the one thing that breaks the taste. HOLD - the phone or play test fails.

No A/B toggle maze or long form to complete.

ASK THE SKILL TO DO THE NEXT CYCLE

"Use shard-checkpoints on the next small pocket. Bring me one portrait target / before / current board, a playable link, the phone reading, and the one decision you need from me."

If the slice is not yet stable or looks rough, the agent keeps polishing that slice instead of opening a new area.
