

Pine Hollow

remaster, blow by blow

Thursday 2026-09-24, 06:37 → Friday 06:48: the first shard, the photoreal pine forest, taken out of "experimental" and merged into main. Then eight more hours to make it hold 30 fps on an iPhone at full resolution. Every steering prompt, every decision board, every progress shot and every deploy, in order.

The Antler King in his clearing at night: an in-engine capture of the finished shard (PH-S1, Friday 06:26), no paint-over. It is now Pine Hollow's title art.

Live: wildshard-singleplayer.vercel.app · plan: [project/archive/2026-09-25-pine-hollow-remaster.md](#) · leftovers: [docs/plans/PINE-HOLLOW-FOLLOWUPS.md](#) · asks: [docs/tasks/asks/E94](#), [E141-E143](#). Steering prompts are Jake's dictation, lightly cleaned of filler. Times are local (UTC-5).

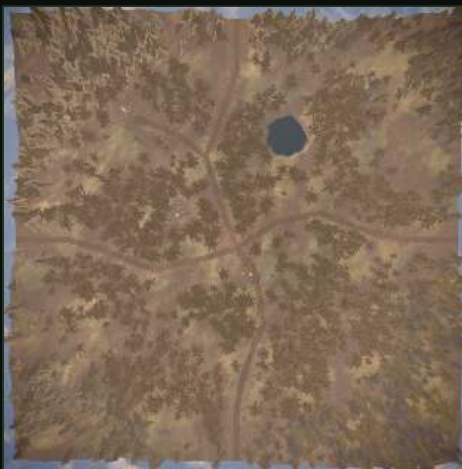

Thu 06:37 — the ask

BRING THE FIRST SHARD UP TO DRIFTWOOD AND NALATI

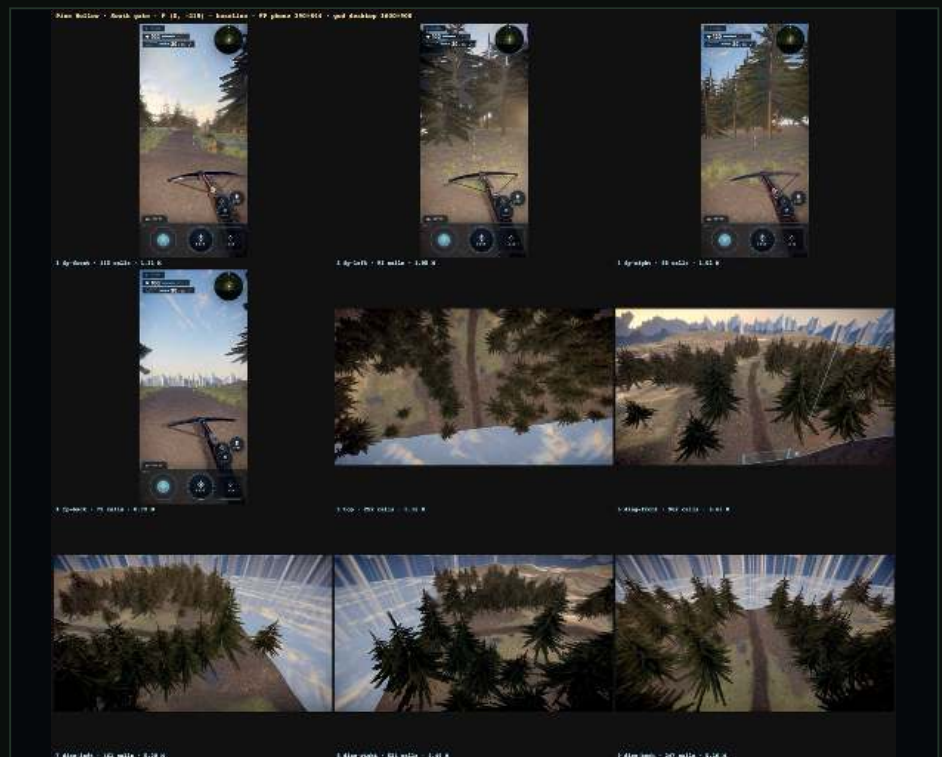

JAKE • 06:37

Read the last 100 commits on main. See what we've been doing for Project Wildshard: the island remaster, Driftwood. Driftwood was remastered. Then check out the Nalati branch; use the [herdr] skill to see what the Nalati agent's doing. The Nalati thing has just been merged into main, they're just working on a new plan, but basically Nalati's new way has more content. Then take all of that, the remaster of Driftwood, all the new stuff that we've been doing over the last 24 hours, and come up with a mega plan to remaster Pinewood. Basically, how do we bring Pinewood to the same level as Driftwood and Nalati, such that Pinewood is no longer experimental? Come up with a mega remaster in graphics, quality, content, design, Blender, music, anything and everything.

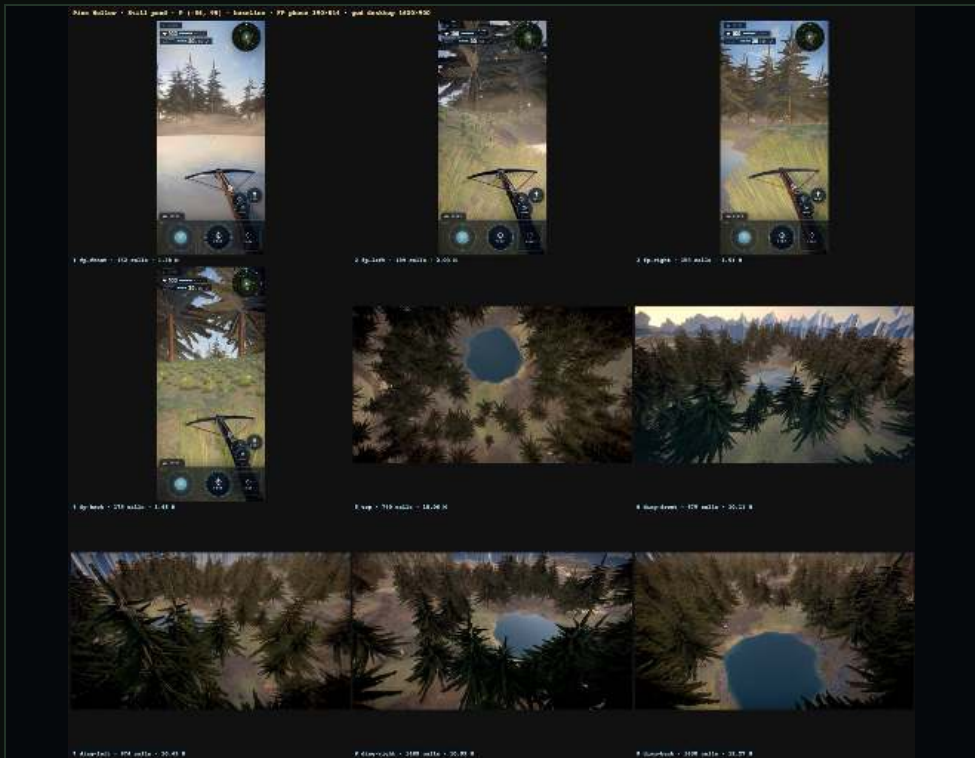

State of the world: Pine Hollow is the original shard (16–17 Sep), a photoreal PBR hunting sandbox with good bones: 1,770 Scots pines on a [BatchedMesh](#) with 3 LOD bands, log cabins you can walk into, 4 species with rarities, a crossbow, harvesting, Rapier physics and a navmesh. Every remaster since then had gone around it. Driftwood's kept it "byte-for-byte", and Nalati built its own look. So Pine Hollow had no quest, NPC, boss, day/night, weather, colour grade or zoned sound, and the title deck still taped it off as **EXPERIMENTAL · rough edges**.

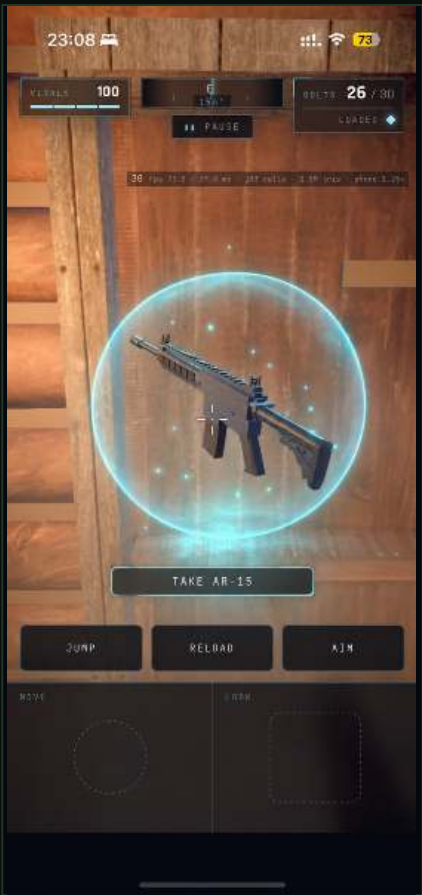

Pine Hollow's map as it was: one bowl, five trails, a pond

Round 0, the "before": 9 angles at the south gate (baseline agent, 07:30)

...and at the pond. The same 9 cameras shoot every later round, so before/after is always like for like

The AR-15 in its cabin pickup orb: the rifle that “doesn’t fit a lantern-lit forest” (PH-U5)

Three research agents went out at 06:38: the Driftwood remaster, Nalati’s content, and an audit of Pinewood. At 06:45 the draft `docs/plans/PINE-HOLLOW-REMASTER.md` was on main (66ccc7f), marked “Jake approved none”: nothing gets built until he picks. The research turned up the first real fork straight away. Driftwood went faceted low-poly and Nalati went painterly; what should Pine Hollow be?

JAKE • 06:48
Ask me any questions or decisions

06:52 – twenty-eight questions

SEVEN WAVES IN FOURTEEN MINUTES, ANSWERED FROM THE PHONE

DECISION • 06:52
PH-U1: Which look should Pine Hollow go for?

Storybook PBR (rec.) Nalati painterly

Driftwood toon faceted **Keep photoreal PBR**

JAKE: No, each shard has its own graphics style, so I think we keep photoreal PBR.

DECISION • 06:52
PH-U2: How big should the world get?

C: bowl + creek + ridge + cave (rec.) B: + old-growth

D: C + mill hamlet A: same bowl, denser

JAKE: D: C + mill hamlet

DECISION • 06:52
PH-U3: What’s the story spine?

Both (rec.) The Warden’s Hollow The Last Hunt

JAKE: Both

DECISION • 06:52
PH-U4: What’s the shard called?

Pine Hollow Pinewood

JAKE: Pine Hollow

JAKE • 06:52 • AND AGAIN AT 06:55, 06:58, 07:01, 07:02
Next wave of questions and decisions

DECISION · 06:54

PH-U5: The AR-15 in cabin 1 doesn't fit a lantern-lit forest. What should the rifle be?

Lever-action rifle (rec.)Keep the AR-15Drop it

JAKE: Lever-action rifle

DECISION · 06:54

Which optional pieces are in scope? (multi)

Fishing at the jettyWeather incl. stormsWolves + night packsWebGPU path

JAKE: Weather incl. storms, WebGPU path

DECISION · 06:58

Wolves are out. What replaces them as the King's adds and the night threat?

The King's thralls (rec.)Bramble / root hazardsBears at night

JAKE: The King's thralls

DECISION · 06:58

Creatures in photoreal: how are deer / boar / elk / bear remodelled?

Generated + rigged (rec.)Polish the procedural furTry both

JAKE: Generated + rigged

DECISION · 07:00

The journal is shard-specific UI. How should it be built?

Generic compendium, skinned (rec.)Inside Explore's viewerPine-only screen

JAKE: Generic compendium, skinned

DECISION · 07:00

The mill hamlet: what lives there?

Lodge + trader (rec.)Scenery onlyAbandoned + thralls

Rare first snow

JAKE: Dawn ground fog, rain

DECISION · 07:06

The ranger, miller and trader: how do they talk?

Text + generated barks (rec.)Text onlyFully voiced

JAKE: Text + generated barks

DECISION · 07:06

Against the other live work (Driftwood V2, HUD, physics, Nalati D)?

Top priority after Nalati (rec.)Parallel track

After Driftwood V2

JAKE: Parallel track

DECISION · 07:06

Which decision boards before Wave 0 starts? (multi)

Map D layoutThe Antler KingThralls + ranger

Journal + trophy wall UI

JAKE: All four

Each “no” deleted work: no wolves, no fishing, no melee, no currency, no thunderstorms, no lore notes, no full voice acting. Each “yes” picked a pipeline that already existed somewhere in the repo: Nalati’s generated and rigged creatures and its boss and elite systems, Driftwood’s day clock, colour-grade fit and painted horizon. The picks went in as PH-U1...U24 (0599c67d, 07:08). One detail mattered later: Jake traded the house perf gate for “30 fps phone OK”, a steady, locked 30.

07:09 — Wave 0 and the boards

MAP · ANTLER KING · RANGER · THRALLS · JOURNAL + WALL

A worktree (wildshard-pine-hollow, branch pine-hollow-remaster, dev server :5176) that never pushes, the way Nalati was built. There were three lanes on disjoint files: boards B1-B4 (photoreal codex edits of live :5176 captures, iPhone portrait with the real HUD), baseline + bug audit, and sound. A fourth slot generalised the shared tools (Blender, the LUT fit, the painted horizon, image-to-3D) so they take any shard, with Driftwood’s output checked byte-for-byte unchanged. The boards landed at 07:25.

JAKE · 07:29

I dont see art pine hollow

It was there, but only on the branch in the worktree. Main never saw a remaster file until the merge.

Pine Hollow Map D — which layout?

A Ridge along the north; old-growth west; hamlet SE on the creek

B Ridge along the east; old-growth north; hamlet SW on the creek

C Ridge + den NW round the Ridge cabin; old-growth east; hamlet S

D Ridge north; old-growth deep SE, far from the gate; hamlet SW

A, full size: the Ridge and fire lookout north, the Den NW, the old-growth west, Still Pond fed by a waterfall, the creek SE to the mill hamlet

B1 · Map D, which layout? A ridge north · B ridge east · C ridge + den NW · D old-growth deep SE

DECISION · 07:29

B1: Which map layout?

A **B** **C** **D**

JAKE: map A

The Antler King — which look?

A Bark Warden: bark-plated, bone skull face, 3 lanterns, amber ribcage

B Moss King: dripping moss, glassy eyes, 6 lanterns, cold cyan ribcage

C Rootbound: gaunt root skeleton, 1 great lantern, foxfire-green ribcage

D Lantern Bearer: boulder-heavy, ~12 lanterns, ember-red ribcage

B2 · The Antler King, which look? A Bark Warden · B Moss King · C Rootbound · D Lantern Bearer

A, the Bark Warden: bark plates, bone skull, 3 lanterns, amber ribcage

DECISION · 07:30

B2: Which Antler King?

A Bark Warden **B** Moss King **C** Rootbound **D** Lantern Bearer

JAKE: They all look great. Choose the one you think is actually possible to implement in game lol. I want the simplest one with the highest chance of AAA success in game.

CLAUDE

A, the Bark Warden. Solid bark plates are the hard-surface shape the image-to-3D tools (TRELLIS and Hunyuan, behind Driftwood's Drowned Captain) rebuild cleanly, and they bend well on a skeleton. Three lanterns fit the fixed pool of night lights; D's twelve would each cost a light all night. B's dripping moss is see-through hanging strands that sway, which is where AAA creatures usually look cheap. C's thin roots are exactly what image-to-3D melts together.

The ranger — who?

B3 • The ranger: A the old warden • B last of the wardens • C hermit ranger

A: campaign hat, grey beard, brass badge, lantern

DECISION • 07:30

B3: Which ranger?

☒ A old warden ☐ B last of the wardens ☐ C hermit ranger

JAKE: Ranger A or B again, whichever one we can implement in game.

CLAUDE

A. Hair and mouths are the two things generated humans usually get wrong, and A hides both: the hat covers the hair, and the beard covers the mouth, so there's no lip sync. The long coat moves as one solid mass, and his lantern is the same prop as the waystone lanterns, so it's free.

The King's thralls — which look?

B3 • The King's thralls: A overgrown • B root-stitched • C hollow husks

A, overgrown: moss and ferns on the coat, glowing cyan glass eyes

DECISION • 07:31

B3: Which thralls?

☒ A overgrown ☐ B root-stitched ☐ C hollow husks

JAKE: Thralls A

B4 · Hunter's journal (top) and trophy wall (bottom), which UI?

Journal A: a full-screen open book, one species a page

Wall C: two mounts, chalk outlines of what's left

DECISION · 07:32

B4: Which journal, which wall?

Journal A Journal B Journal C Wall A Wall B Wall C

JAKE: Journal A, walls C

Five picks in three minutes, each recorded in the plan as its own commit (4020e4f map A, 29fec1a the King, bc2bff6 the ranger, 0939013 the thralls). Twice Jake handed the pick back with one rule, "whichever we can implement in game", and that rule decided every art pick after this one.

07:40 – the world and the light

MAP A IN THE ENGINE · DAY/NIGHT · WIND · THE JOURNAL

Nalati wasn't on main yet, and its creature, boss and elite systems were what the King, the elites and the quest needed. So the free slots took the work that didn't depend on it: the map A layout (07:46), then Wave 1, the look (08:12). Meanwhile the baseline agent fixed the forest pop-in on phone (E94: trees swap LOD at 80 m, where shadows end, instead of 55 m) and stopped the rifle pickup recompiling every lit shader (76 → 113 programs).

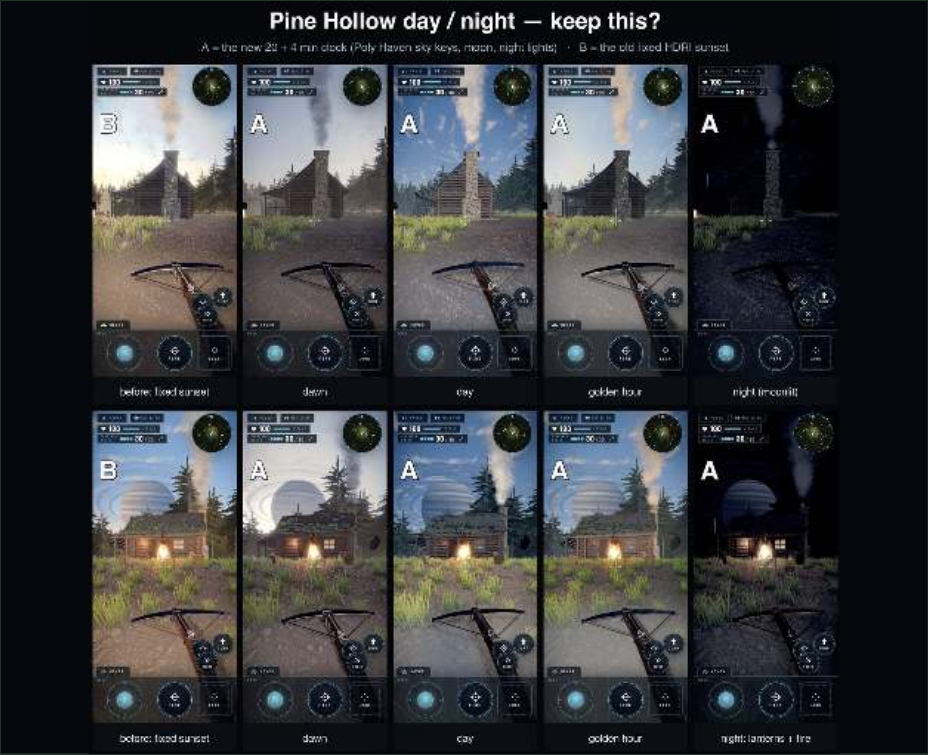

Layout agent, 08:33: Jake's map A · the in-game top-down view · the walk check (every landmark reachable)

first person at the new places: terrain and building pads only, no buildings yet

Map A in numbers: the lookout pad at +46 m, a 197 m zipline line down to the Hollow, a 360 m creek past the beaver dam to the hamlet, the den in the NW with all 3 bears, a flat 30 m arena for the King. 12 trails instead of 5, 18 named places instead of 7.

Day/night board, 09:02: A the 20 + 4 min clock (dawn, day, golden hour, moonlit night) vs B today's fixed sunset

The clock runs on 7 real sky photos (qwantani, one place over one day), baked for the IBL. Cabin fires, lanterns and windows light with the clock; there are fireflies over the pond. It added no draw calls and caused no shader recompiles through a full day. Claude's own read on the board: night is too dark away from the lanterns, and golden hour reads like dawn.

compendium agent, 09:09: journal A in the game, 39 generated pencil sketches, seen / taken / visited per shard

JAKE • 09:45

% progress done ?

CLAUDE

About 25 % by plan rows, closer to 20 % by effort; the heaviest rows haven't started. 35 commits on the branch.

JAKE • 09:55

Ask me any questions or decisions

PH-L6: one shared wind, a gust that travels across the forest (before / after)

DECISION · 09:56

Day/night board: keep the new clock?

A + brighter night (rec.)

A as is

B, fixed sunset

JAKE: A + brighter night

DECISION · 09:56

The creatures, King, elites and quest wait on Nalati reaching main (~40 % of what's left). How do we unblock?

You merge Nalati soon

I merge Nalati for you

Port the pieces now

JAKE: Port the pieces now

DECISION · 09:56

Phone draw calls went up 9-22 with the new map. When should perf be worked?

Now, as a lane (rec.)

After the landmarks

At ship time

JAKE: Now, as a lane

DECISION · 09:56

How do you want to see progress?

Playable preview site (rec.)

Images only

JAKE: Images only

JAKE · 09:56

Keep building. I'm afk.

"A + brighter night", 10:01: the cabin, grass and treeline readable by moonlight

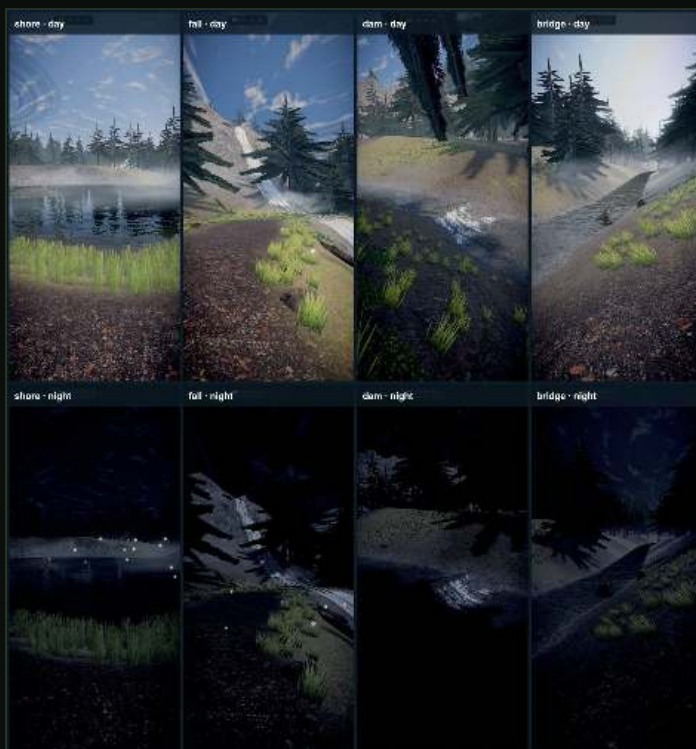

PH-L3 night lights: the old fixed sunset · day · dusk · night (pooled lights, intensity only)

"Port the pieces now": Nalati's Boss, Elite, the boss bars and the creature rig-bake tool were copied into the branch word for word, so the eventual Nalati merge would see identical files instead of a conflict. It worked; those files merged cleanly at 23:31.

10:10 – water, perf, landmarks, horizon

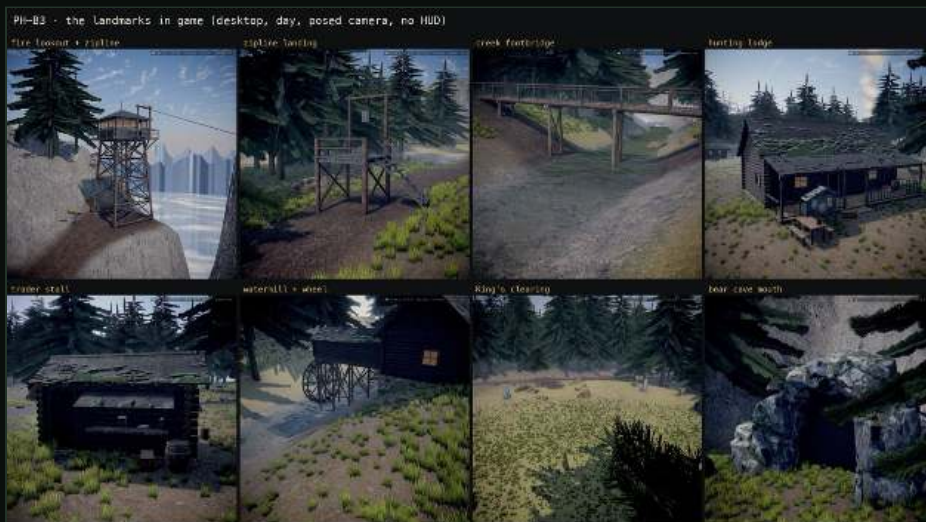

THE LOOK WAVE, IN PARALLEL WITH A 30 FPS LOCK

the landmarks at night, first person on the phone

water lane, 10:10: the new pond, creek and falls by day and night.
Phone draw calls at the pond 161 → 127, its render time -40 %

11:07, the perf lane: the phone locked at 30 fps (Pine Hollow only), drawing every second refresh at 60 Hz and never alternating between 30 and 60. Headless, on a phone-speed CPU, every frame held 33.3 ms with 12.6–14.7 ms of work. The new map's extra phone draw calls were all animals and their shadows, not the ridge; each animal's shadow became one draw instead of three (gate 126 → 114, cabin 178 → 155, pond 125 → 99). Keep the word *headless* in mind; it comes back on Friday morning.

PH-B3, 11:50: the fire lookout + zipline, the landing, the creek footbridge, the hunting lodge, the trader, the watermill with a turning wheel, the King's clearing, the cave mouth

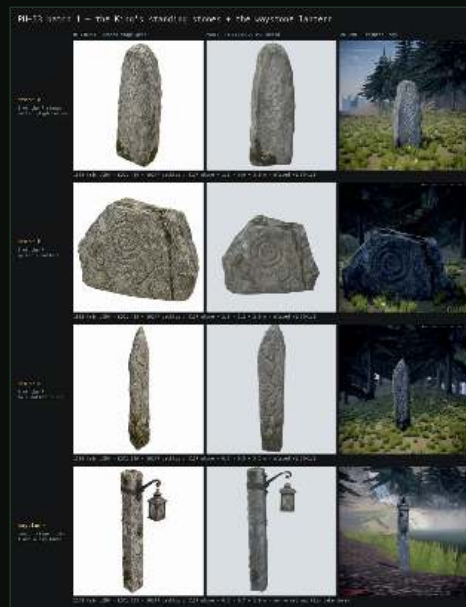

image-to-3D props, batch 1: the King's standing stones and the waystone lantern (reference · model · in game)

The landmarks agent's honest note on its own shot: from the lookout the view ended in flat blue paper-cutout mountains and a white cloud sea. That became the next lane.

painted-horizon lane, 12:55: the walk-around from the lookout deck. A painted 360° far country (forested ridges, a snowy range north, lakes, valley mist) replaces the paper rings, with no seams and 2-4 fewer phone draws

13:37 – the King, the quest, the creatures

38 % → 62 %: THE NALATI PIECES PAY OFF

JAKE • 13:37

Hello, what percentage complete of the plan are we?

CLAUDE

About 38 % by rows, up from 25; closer to 35 % by effort. The heaviest rows are ahead: the quest, the Blender pass, the trees and the NPCs. 57 commits.

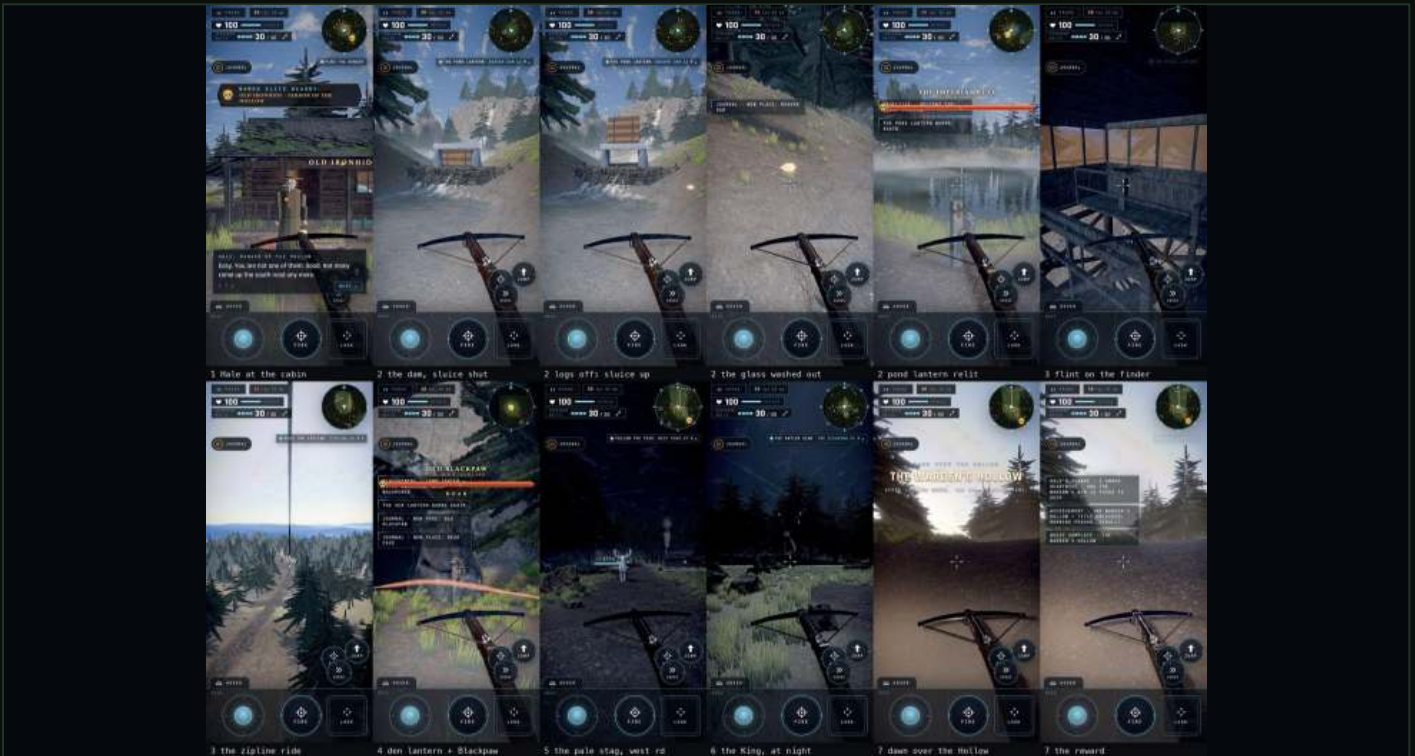

elites + King agent, 13:55: the intro card → phase I (the ribcage glows open, root-ring stomps) → II (Lanterns fall, thralls called) → III (darkness, charge lanes) → the Warden's Longbow. The body is a STAND-IN, a scaled-up elk

Old Ironhide's telegraphed gore charge. The Ghost Stag fades out of aim, Old Blackpaw bursts out of the cave with a roar-stun, the Imperial Bull bugles rivals in at dusk

the hamlet, 14:48: the lodge's rotating contracts, Mott's swaps (no coin), Brandt the miller

quest agent, 14:48: The Warden's Hollow, start to finish. Hale sends you out → the beaver-dam sluice relights the pond lantern → the lookout's flint, then the zipline down → the den lantern and Blackpaw's ambush → a pale stag leads you to the King → the fight → dawn, every lantern lit

creature agent, 14:41: before, today's procedural animals

after: generated + rigged with Nalati's pipeline, every rare coat (white, piebald, ghost, Scarback, Ironhide, Imperial), plus the moss thralls

15:34: Hale the ranger, Mott the trader, Brandt the miller, generated, rigged, idling on the phone

The creatures came out **cheaper** than the procedural ones they replaced: 85k triangles on the phone at the busiest view against 101k, still 1 draw + 1 shadow draw per animal. The Hunyuan3D jobs ran under one shared local-model lock, the real limit on how many art lanes could run at once.

Pine Hollow PH-M3 · the Antler King: concept | stand-in | model

CONCEPT board B2 pick A, the Bark Warden

REFERENCE ref-antler-king.jpg (codex)

MODEL Hunyuan3D-2 hull on the elk rig (day, x1)

BEFORE stand-in (?creatures=proc), phase I

AFTER the Bark Warden, phase I (lanterns on his rack)

AFTER phase III, the ribcage open

15:34: the King, concept → reference → Hunyuan3D model; stand-in vs the Bark Warden in phases I and III. He stands on four legs like an elk; upright would need its own skeleton

weather lane, 15:47: the Ghost Stag in clear vs dawn fog, fog from the lookout, puddles and rings in the rain. In rain, herds shelter under the big trees (distance to the nearest tree 11 m → 7 m)

loadout agent, 16:55: the lever-action, the lever cycling between shots, then iron sights

the Warden's Longbow: hold to draw, an amber drop arc, wind drift. Honest read: the bow is good, the code-built rifle reads blocky

JAKE · 16:12 · AND AT 18:52

What percentage complete are we?

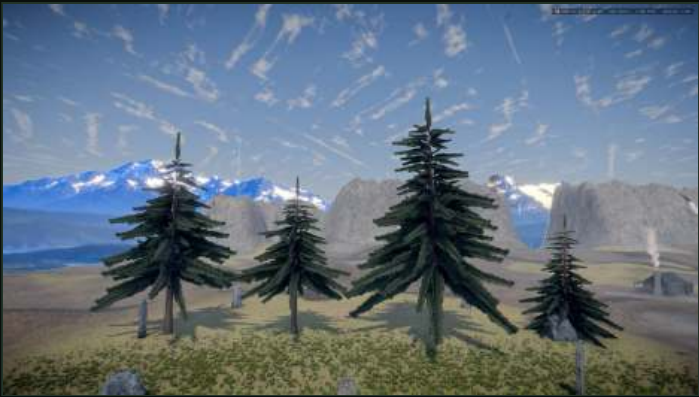

19:11 — sound, trees, and Nalati lands

THE EVENING: 70 %

Sound. The sound lane finished its generation runs (MiniMax Music, MOSS SoundEffect, Stable Audio): calm-night, the King's three phases and the dawn sting, zoned beds, barks. Most of it wasn't hooked to anything, though, and it loaded in the background, which breaks Jake's rule (E44) that everything loads at the loading bar. So an audio-wiring agent followed. By 19:39 the music switched to calm-night after dark, went tense under an elite, ran the King's phases and played the dawn sting; ambience sat at the creek, the waterfall, the mill wheel and the cave; and the download was 32.8 MB against a ~30 MB budget.

PH-B4 trees, 19:45: A, the Blender set: Scots pines, firs, 44-52 m old-growth giants, silver birch, dead snags, saplings (14 variants)

B, today's pines. A uses 30-58 % fewer forest triangles for the same draw calls

JAKE • 20:00
What percentage complete now?

CLAUDE
About 70 % by rows, 65 % by effort. Running now: the look loop and colour grade ("the step from good to AAA"), the ridge crags and cave, ambient life and skinning.

RELAY • THE NALATI SESSION • 20:20
Nalati landing NOW (the user approved): main fast-forwards to b3d4e00 in the shared checkout in the next minutes; your uncommitted hunks in files it touches get a 3-way merge and stay uncommitted. Pause git commits / push-main.sh for ~10 min, then fetch.

RELAY • THE NALATI SESSION • 20:26
Nalati LANDED on main: origin/main = b3d4e00 (fast-forward, live build b3d4e00-muga27bg; all three shards boot clean on prod).

Nothing here had to pause: the remaster agents only ever committed to their own branch, and none of them ran push-main.sh. The cost came later, as a merge: Nalati had edited the same shared files (main.ts, Game.ts, Sky.ts, Music.ts/Stems.ts, the quest and physics code).

life agent, 20:51: ravens gather on your kill 18-52 s later, peck, lift off when you come close

skinning: a 1.5 s beat, the view kneels, two knife strokes, then the items land

polish, 22:30: real raven, great grey owl and pileated woodpecker models replace flat black shapes, still one draw call

21:54 – clearing the boards

LEVER A · 34 MB · TREES · WATER · HORIZON · WEATHER · CRAGS

JAKE · 21:54
% complete ?

A in Blender: case-hardened receiver, oiled walnut, worn blued barrel, buckhorn sights. ~8k tris desktop, 4k phone, same draw calls

Lever-action board, 21:31: A the Blender model vs B the code-built rifle (hip · iron sights · mid-cycle · the cabin pickup)

DECISION · 21:55
Lever-action: which?

A Blender model B code-built

JAKE: Lever A

DECISION · 21:56
The download is 34.4 MB. Accept it, or trim to under 30?

Accept Trim to < 30 MB

JAKE: 34 MB is fine.

JAKE · 21:56
What else do you need me to pick? Show me images.

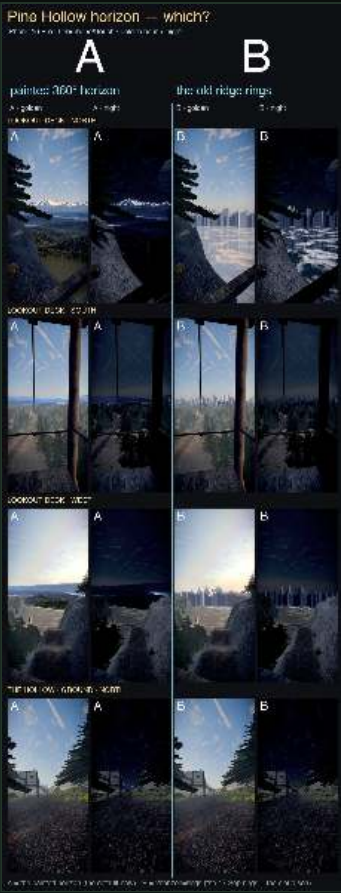

Four boards had sat unanswered since the afternoon, each with the new version already on by default. They went out again together at 21:59, and the answers came back in four one-line messages inside a minute.

Trees: A the Blender species set vs B today's pines

Water: A the new pond (real reflections, cheaper) vs B

Horizon: A the painted far country vs B the paper rings

Weather: A dawn fog + rain showers vs B always clear

DECISION · 21:59

Trees?

A Blender set

B today's pines

JAKE: Trees A

DECISION · 21:59

Water?

A new pond

B today's

JAKE: Water A

DECISION · 22:00

Horizon?

A painted

B rings

JAKE: Horizon A

DECISION · 22:00

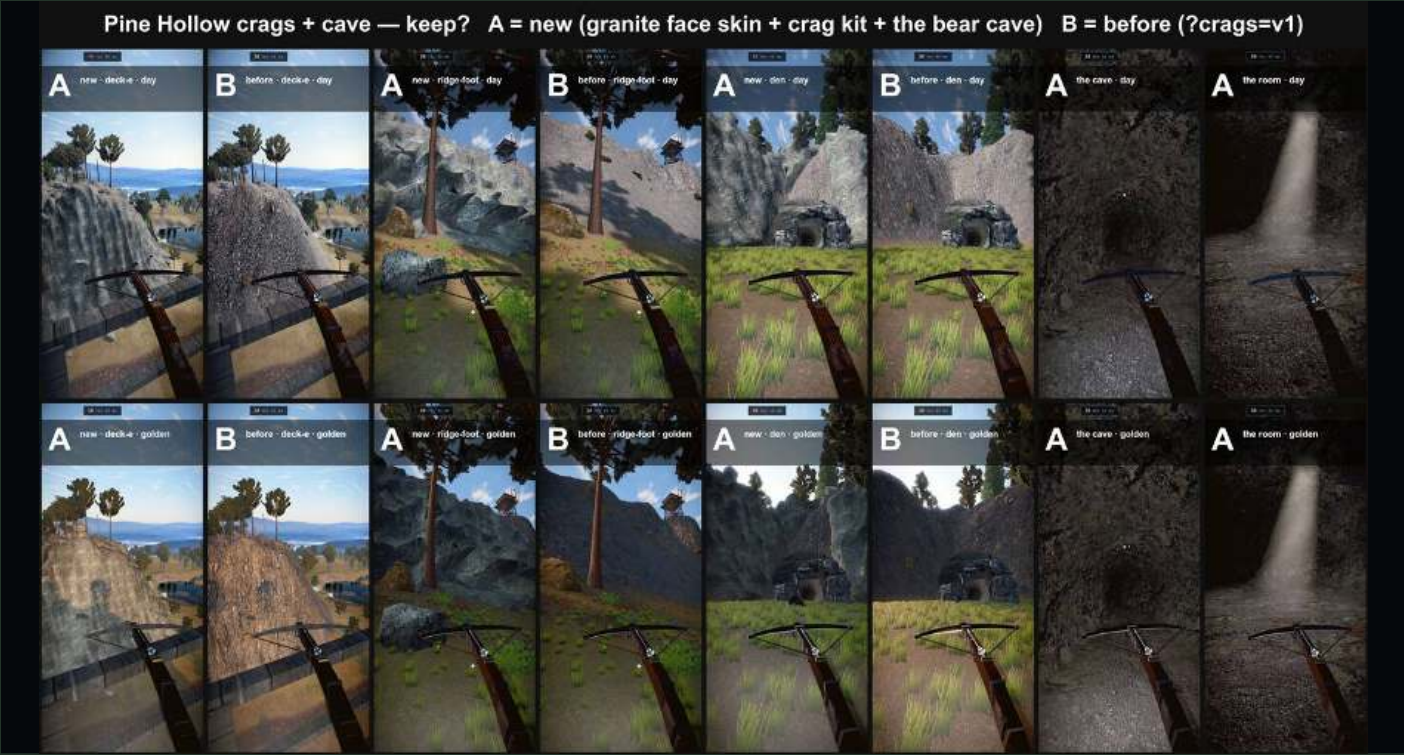

Weather?

A fog + rain

B always clear

JAKE: Weather A

Trees A came with a condition from Claude's own read of the board: in the Hollow, A looked thin and park-like where B looked like dense forest, so the look-loop agent was told to make the Hollow denser. Remember that sentence.

Craggs + cave, 22:19: A the ridge as stepped granite (ledges, buttresses, tors, scree) and a 36 m bear den through a 1.6 m squeeze vs B today's smooth grey slopes. +3 phone draws at worst, ~+1.2 MB

DECISION · 22:21

Craggs + cave: keep?

A keep

B smooth slopes

JAKE: Craggs cave keep

22:23 — five agents, and main merged in

“REBASING ON MAIN IS THE BIGGEST THING”

JAKE · 22:23

What percentage complete is the whole plan? How many more hours? Can we use more sub agents to speed it up? When do you think we can be done? We'll just remaster and merge the branch.

DECISION · 22:24

How many build agents in parallel from here? (Standing cap 3; the real limits are 3 headless game browsers, one local-model lock, one worktree.)

5 agents (rec.)

Stay at 3

6+ agents

JAKE: 5 agents

DECISION · 22:24

Which rows can move to a follow-up plan AFTER the merge? (multi)

WebGPU path (P5)

Per-shard code split (0.2)

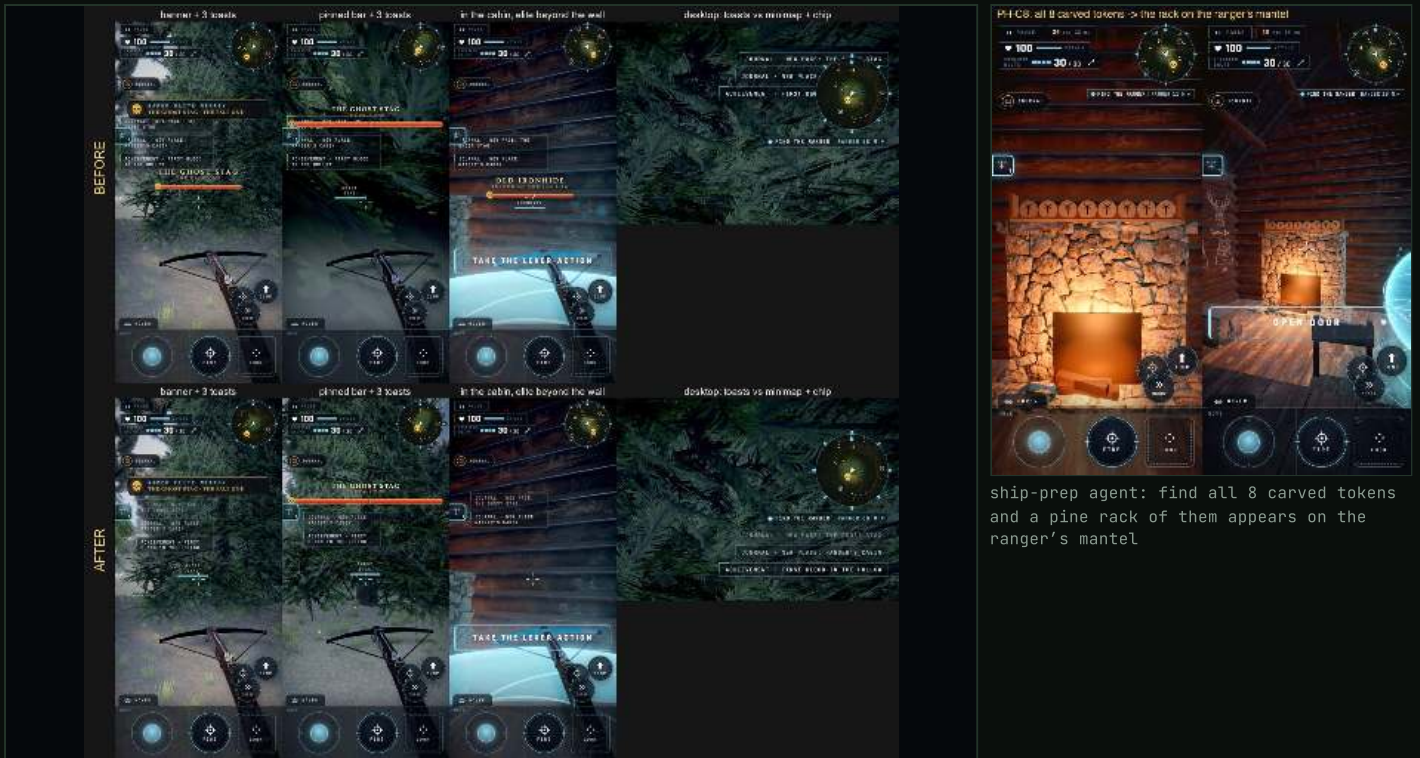

Whole-map Blender pass (B1)

Free-model kit + cabin lift (B5/B6)

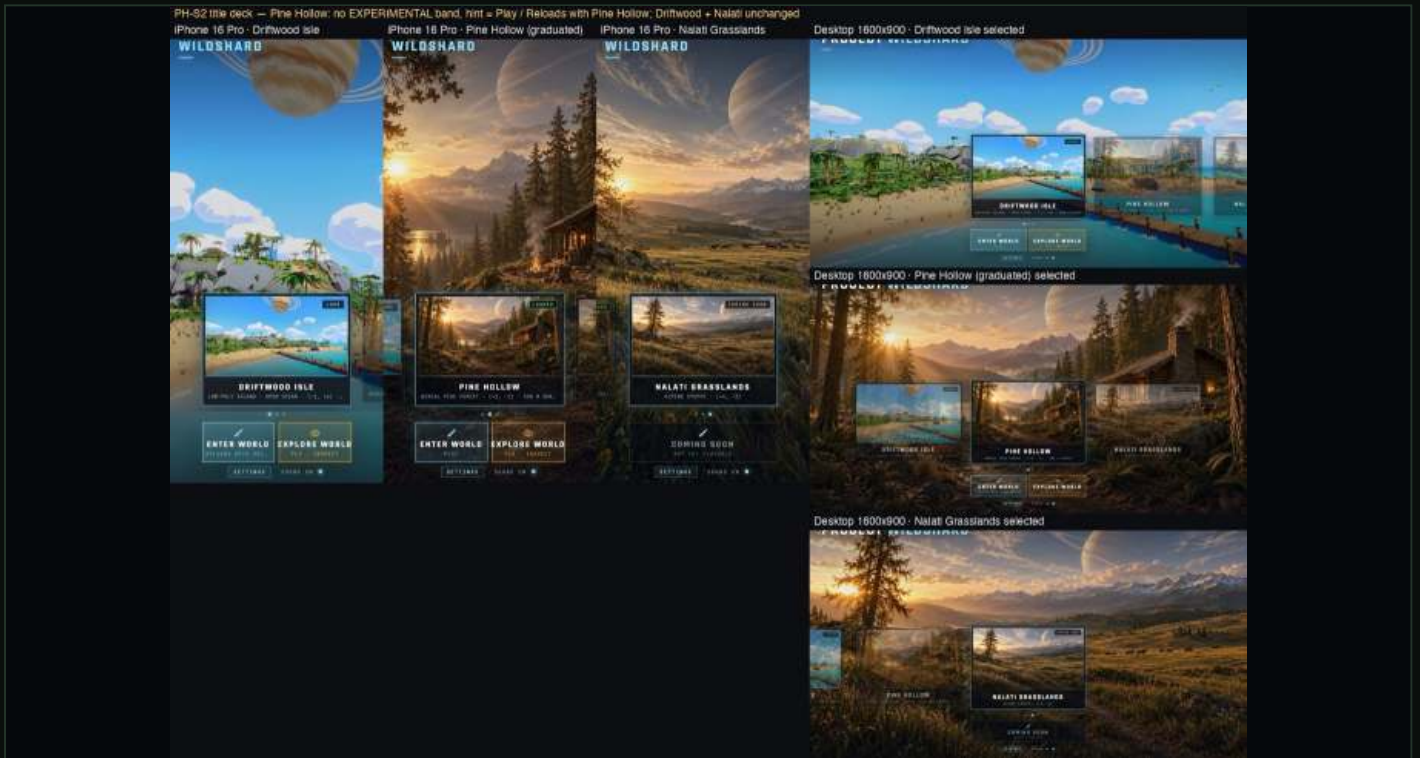

JAKE: All four

CLAUDE

With five rows moved out, the remaster is about 80 % done, roughly 40 of its 50 remaining rows. I estimate 6–9 more hours of build time, plus however long your picks take. If the next boards land while you're around, it can merge tomorrow morning.

polish agent, 22:30: before → after. Toasts stack below the elite and boss bars (max 3), and the elite's name no longer shows through cabin walls

ship prep, 23:00: Pine Hollow graduates. No EXPERIMENTAL band, no “rough edges”, a real blurb; the deck stays Driftwood → Pine Hollow → Nalati. The hero is still the old painting, and Nalati says “coming soon” only because the branch predates its landing

JAKE • 23:02

I thought the sub is running. It looks like you're near completion. You're gonna have to correlate with all the sub agents. How to rebase the main. Rebasing on main is the biggest thing.

CLAUDE • 23:31

Main is merged into the remaster branch (fddbda7): Nalati v0.3.0 and everything on main. I merged rather than rebased: the same end state, without re-resolving the same conflicts commit after commit. All four agents paused at clean commits, I merged, then resumed them with a list of what changed in their files. About 56 files resolved by hand, both shards keep their features, and tsc, oxlint, the CSS check, the build and all 509 tests pass.

The merge caught a quiet one: Pine Hollow's loading bar was now downloading all of Nalati's steppe sounds, which took the phone to 244 requests against a limit of 180. The sound-gaps agent brought it back to 165 and shipped the 12 missing sounds: the lever's dry click, the longbow's loose, stone impacts, ravens, the owl, the woodpecker, two knife strokes.

Fri 05:25 – sign-off

THE LOOK LOOP • THE RENDER FIX • THE HERO ART

DECISION • 05:25

The phone's first download is 36 MB (you OK'd ~35). The only big lever left is the 2 music styles you haven't selected (3.85 MB).

Accept ~36 MB (rec.)Selected style only (~32 MB)

JAKE: Accept ~36 MB

JAKE • 05:25

Are we done ?

The look loop is the step from “good” to “AAA”: the 9 fixed cameras at each zone, shot in game next to a photoreal target, with the colour grade (a LUT) fitted to the targets and the gap measured as $\Delta E00$. Round 2 (Hollow, pond, old-growth) brought needle-litter ground, a denser Hollow, a fuller understory and less milky haze; the worst colour gap dropped from 14.8 to 4.2. Round 3 added the ridge, the den and the hamlet: heath, dry golden grass, 12× shrubs, a brighter sky. Worst gap over all 54 frames: 4.7, against a bar of 6.

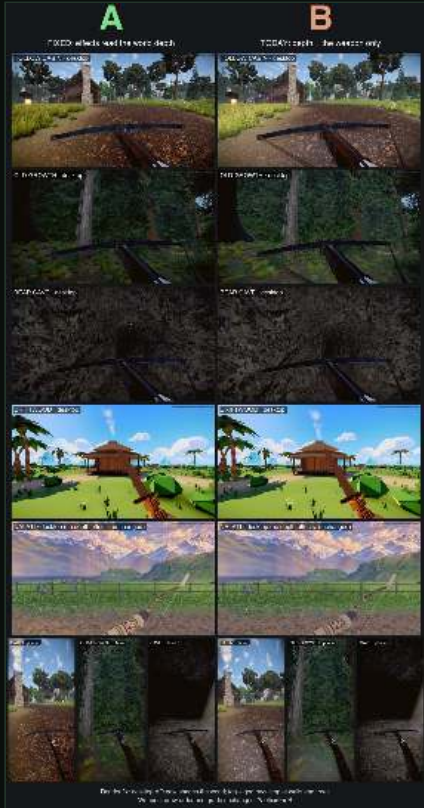

look loop round 2 (23:31), the old-growth + King's clearing: in game | photoreal target round 3, the Ridge: in game | target round 3, the mill hamlet: in game | target

The round-3 board as sent, 05:36 (split in two for the phone): before | after | target at the Hollow, the pond, the old-growth...

...the ridge, the den and the hamlet, with the $\Delta E00$ table

Render fix: A the post chain reads the world's depth (desktop A0 shades the world, fog and god rays stop at walls) vs B depth = the weapon only

DECISION · 05:50

Look loop round 3, all six zones: sign off, or name the zone that's off?

Sign off A zone is off

JAKE: Yeah, look, look is fine for now.

DECISION · 05:51

Render fix: A (fixed) or B (today)?

A fixed B today

JAKE: If RenderFixA is best, just do RenderFixA.

JAKE · 05:52

Yep. I mean, you say you want me to choose. I chose. Then when you've finished, just merge it into main. Merge it back into main. We want to wrap this shit up. Anything that another agent needs to do on Pinewood going forward goes into a Pinewood follow-up plan in docs/plans.

JAKE · 06:25

How's the hero art lol, I didn't know it takes so long

The app icon Jake kept: the painted cabin. The hero agent had re-made every shard's icon and splash as the King's skull (7dbbf32), a taste call for the whole app, so it stayed out of the merge

PH-S1, 06:26: Pine Hollow hero, real in-engine captures, no paint-over. A the King at night · B old-growth + stones at golden hour · C the Hollow at dawn / the hamlet at dusk. A landed

06:48 — on main

FAST-FORWARD TO 18B3D6BE · LIVE 18B3D6B

Main kept moving while the branch landed: about 80 more commits from other sessions, so main was merged into the branch four more times before the end, including the last 4 commits that deleted Driftwood's procedural island and Nalati's separate edge bake. Then a relay from the Driftwood session arrived mid-turn: its agents had WIP in `src/main.ts` and were holding `push-main.sh` until they heard "landed". Local main also carried 2 commits that session hadn't pushed yet, out of respect for the hold. Those came into the branch first.

CLAUDE · 06:52

It's on main: `origin/main` = 18b3d6be, the whole remaster, landed as a fast-forward so every commit id in the plan still points at the right commit. The pre-push gate passed (type-check, lint, CSS, tests, build), the deploy succeeded, and all three shards boot with 0 errors on the live site.

06:51: Pine Hollow on the phone, from the production site, build 18b3d6b

the pre-land check: toasts on the phone layout after the last merge

hero candidate 5, the pond and the waterfall off the granite ridge: the whole remaster in one frame (in-engine, 06:26)

JAKE • 06:54
/prepare-to-exit

06:57 – 14 fps

THE PHONE IS THE TRUTH

JAKE • 06:57
FPS is way below the 30 FPS target. It performs really badly. Also, the density of the forest is too much. As I'm going around trying to hunt animals, the forest is too fucking dense. There are way too many trees. The screen is just green. I'm moving around and it's just green, green, green, green, green foliage.

Jake's iPhone, 06:56: the old-growth by the King's stones, the Ghost Stag engaged. The fps pill reads 14 fps / 71 ms, and the screen is green

E143, live 08:03 in build f041bac: before → after at the gate, the Hollow and the stones. Trees 1,666 → 962; within 100 m of the Hollow 413 → 126; shrubs 18k → 3.75k

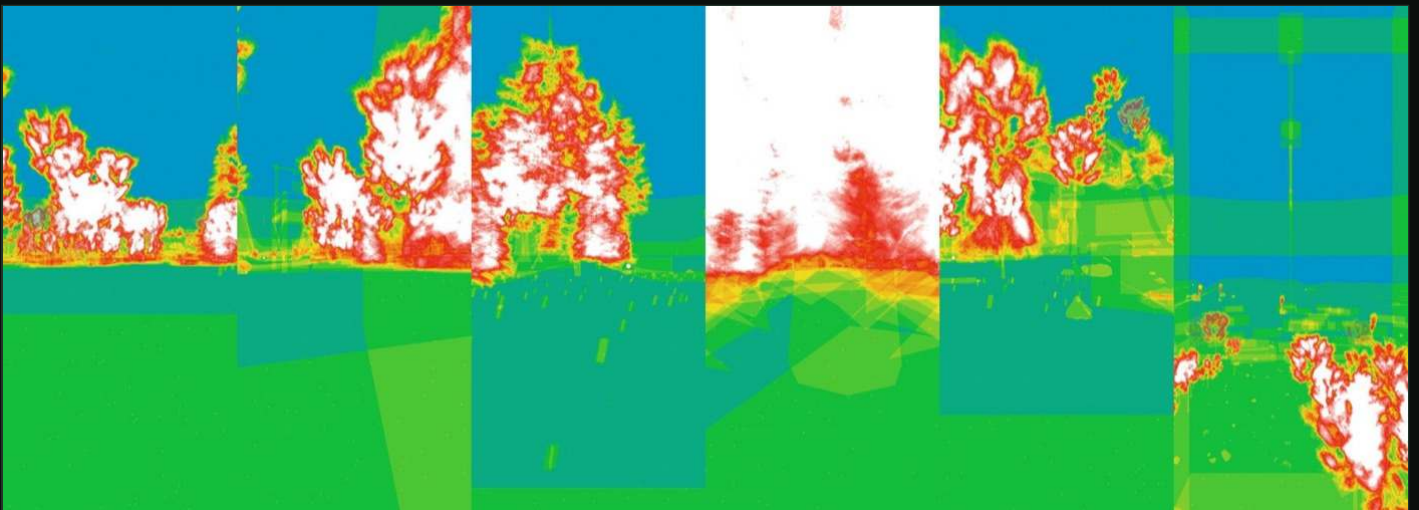

CLAUDE • 07:00

Pine Hollow is live, but it isn't good enough yet. **This session is not done.** Why the tests missed it: my performance checks ran headless with the CPU slowed 4× and held 30 fps, so they only measured the CPU. On your phone the GPU is the bottleneck: layers of see-through foliage drawn over each other, at 2× resolution. On top of that, look-loop rounds 2–3 made it worse. They multiplied shrubs by 12, filled the shade with ferns, and more than doubled the Hollow's trees (178 → 405 within 100 m).

JAKE • 07:01

Okay, start a heavy FPS optimization agent.

Two agents on main, split by file so they couldn't collide. The **fix lane** (E143) thinned the forest: the Hollow grove's second tree grid gone, the whole forest at 0.7 of its keep, the old-growth ×1.6 instead of ×4 (giants 85 → 63), shrubs ×12 → ×2.5, ferns out of the dense shade, phone grass 56 → 40 per cell. The **heavy lane** (E142) did what nobody had done yet and measured the GPU: `scripts/pine-hollow-gpu.mjs` timed each pass at the iPhone 16 Pro's resolution and painted overdraw heat maps. It also built an on-device probe: tap the fps pill ▶ RUN PROBE, and ~60 s of A/B rows say where the phone's frame goes.

heavy lane, 08:42: overdraw per pixel at six poses. White and red are stacked alpha-tested foliage cards shading the same pixel again and again

08:52 — “dynamic resolution is a hack”

30 FPS AT 2×, NO SHORTCUTS

The heavy lane's first shipment (build 33554ce) included **dynamic resolution**: when frames ran late, the phone's render scale stepped down from 2× toward 1.25×.

JAKE • 08:52

Hey. Dynamic resolution is a hack, right? It's a complete bullshit hack. We should not be going back from 2 to 1.25. We should just be doing performance optimizations necessary for hitting 30 FPS at 2.

CLAUDE • 08:53

You're right. Dynamic resolution hides the problem rather than fixing it. I'll remove it, keep the phone at 2×, and get to 30 fps with real optimizations. Saving that as a standing rule first.

JAKE • 08:53

Are you done? What's the A/B stuff you're doing? I can't tell how far done you are.

JAKE • 08:58

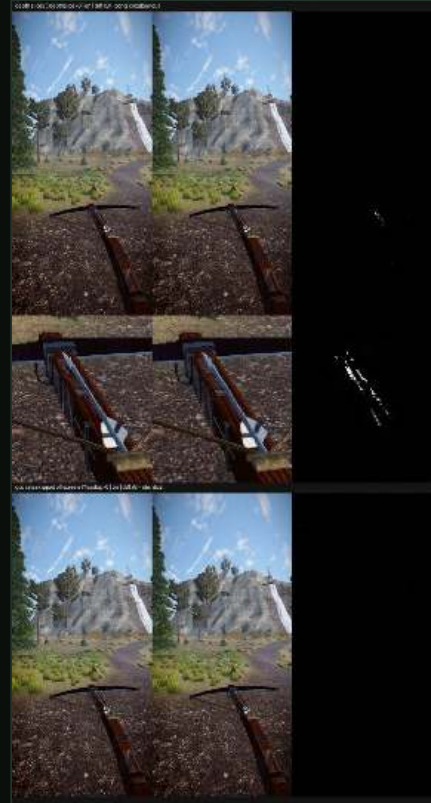

The FPS thing, when you tap it, it shows the detail. That should be a toggle, right? I should be able to turn detail mode on, move around a lot and keep looking at it. It shouldn't just fade away.

08:59, Jake's phone: the JOURNAL button in the PAUSED header

after: the journal is a tab in the BAG menu. Map • Inventory • Journal • Achievements (live 7007082)

E142 at 2×, 10:11: each cut ships only with an identical before/after (the diff column is black) — the depth slices, the god rays skipped out of view

JAKE • 08:59

What the fuck is this journal button? This is the dumbest place to put it. Tell me where we can put it instead.

JAKE • 09:00

I'm playing it, it's 25 to 30 FPS. It's a lot better, but it's not perfect.

DECISION · 09:05

Where should the hunter’s journal live? (It comes out of the PAUSED header either way.)

- A tab in the BAG menu (rec.)
- Inside the Inventory tab
- Keep only the HUD button
- No button at all

JAKE: A tab in the BAG menu

The 30-at-2× cuts, live in e85351c at 10:11, each proven by an identical-looking A/B: (1) the sky's IBL refresh ran all at once every 2 s, ten 256-sample GGX passes costing ~2.3 ms of GPU in one frame, a periodic stutter; now one step a frame over 11 frames. (2) The phone viewmodels draw into near slices of the depth range instead of clearing depth mid-frame, so there is no full-screen depth copy. (3) The god rays’ passes run only when the sun can be in view. (4) The ground shader evaluates each noise only where its layer is present. Together, the frame is 8–12 % cheaper at every pose, and the render scale stays fixed at 2×.

JAKE · 09:14 · AND AT 09:28

Are we still working, what’s the % done?

12:16 – the fight drop

AN FPS PANEL YOU CAN SCREENSHOT

JAKE · 12:16

What’s left? Any questions or decisions for me?

DECISION · 12:19

App icon + splash: switch the whole app to the Antler King art?

- Keep the painted cabin (rec.)
- Antler King icon

JAKE: Keep the painted cabin

DECISION · 12:19

The small JOURNAL button on the game screen: keep it now it’s a BAG tab?

- Remove it (rec.)
- Keep it

JAKE: Keep it

DECISION · 12:19

Mott the trader’s voice was generated as a woman, but the name and model read as a man.

- Re-roll as a man (rec.)
- Keep it

JAKE: Re-roll as a man

DECISION · 12:19

Anything from the Pine Hollow follow-up list to build next?

- Model polish
- Crags close-up
- Weather extras

Nothing for now

JAKE: Nothing for now

JAKE · 12:36

OK, I’ll try for 30

Jake's screen recording, 12:38 (first frame): sprinting along the creek, the Imperial Bull engaged, 18 fps

Claude's frames from the 6 s clip: frame p50 56 → 61 → 64 ms, p95 95-100 ms, but only 116-120 draw calls and 0.8-1.0 M triangles

13:06, Jake's phone: the new panel (update · render · gpu~, the game logic by system, spikes, a sparkline) and no way to close it

JAKE · 12:41

FPS tanked. Can't tell if it's models or triangles, or if it's me aggroing all the mobs and it's enemy AI.

JAKE · 12:43

Did you say we have a fps perf test button in game somewhere?

JAKE · 12:46

Can you add the debug info you need for the game loop that's not rendering, for the fps drop? Or anything else you can think of that I can't think of. What do you need in the fps detail panel so I can screenshot it and you go "yeah, that's the problem"? Or maybe you can reproduce and benchmaxx lol.

Live at 13:03 (8e5e308): the fps panel answers **CPU or GPU** on the phone. **update** = game logic, **render** = the CPU handing draws to WebGL, **gpu~** = the rest of the frame (GPU, iOS compositor, the HUD's style/layout/paint, which iOS can't time directly). The game logic is split by system, spikes over 50/100 ms carry their cause, there are counts (animals chasing, DOM writes a second, programs), a sparkline coloured by the dominant cost, and REC 30 S + COPY. The timers run only while the panel is open.

JAKE · 13:06

It needs a close button. Bro, add one.

JAKE · 13:16

The menu covers the fps pill, so can you render the fps pill in the menu, between frame meter and close button?

13:15: the CLOSE × bar is in (6dcd57c), and the panel now hides the pill it replaced. The pill moved into the header next (9210415)

Jake's screen recording, 13:24 (first frame): the fight again, the sparkline solid magenta

7.8 s into the same clip: the panel Claude read gpu~ 35-48 ms from (update 5-6, render 7-8, the DOM writing 60-90× a second)

JAKE • 13:24

It's all purple, right?

CLAUDE • 13:25

Yes, the bars are solid magenta, and magenta means the GPU. So the fight drop is graphics work, not the enemy AI. Walking calm: gpu~ 0 ms. In the fight: **35-48 ms**, while triangles barely move (1.0 → 1.2 M) and the AI costs ~3 ms. So it isn't the models. My main suspect is the fight UI, which redraws 60-90 times a second on top of the game.

JAKE • 13:36

Do you think it's the screen recorder iOS itself?

It could be part of it: every fight number had been taken with the iOS recorder running, and every calm one without. But the fight lane found real waste anyway (4ff49d2, live 14:06). While an elite is engaged, its minimap skull pulsed with an **infinite CSS filter animation**, and on iOS that repaints and re-composites the page over the canvas at 60-120 Hz. That lands exactly in gpu~, and walking has no such animation. The pulse is now driven by the game's frame. The elite bar and compass stopped writing and measuring the DOM every frame, and far animals whose pose is frozen skip ~3,500 bone matrices.

JAKE • 14:13

Am not gonna toggle shit, nah, lol, for you with buttons.

JAKE • 14:13

Ain't got time for that either. Fix it or tell me it's good enough and we wrap it the fuck up.

CLAUDE • 14:24

It's good enough, so we're wrapping it up. Calm play: 30 fps at full phone resolution, with about 26 ms spare in every 33 ms frame. Fights: the fixes for the likely cause are live but not confirmed on your phone. If fights still lag, say "fights still lag"; it's written up as F-P6, and you won't be asked to press any switches.

JAKE • 12:25

What's left? Do we need a remainder plan in docs/plans, do we have one?

It already had one: docs/plans/PINE-HOLLOW-FOLLOWUPS.md, marked approved by no one. It holds the five rows moved out at 22:24, the GPU levers not taken (F-G1...G10), the fight check (F-P6), the fog-white King (F-L7), and the two checks only Jake can do (an iPhone reading and a listen to the music). The session ended at 22:05; at 22:25 the merged branch was deleted (E171).

Deploys

PRODUCTION BUILDS • THE REMASTER ITSELF SHIPPED ONCE, AS A MERGE

From 07:09 Thursday to 06:48 Friday, nothing deployed: Jake chose “images only” over a preview site, and the branch never pushed. Everything below is main.

LIVE	BUILD	WHAT WENT LIVE
Fri 06:50	18b3d6b-mugwfom6	the whole remaster, fast-forward: map A, landmarks, day/night + weather, the Blender trees, generated creatures + thralls, the King, 4 elites, the quest + hamlet, the journal + wall, lever-action + longbow, sound, the graduated card, the in-engine hero
06:56	bd41b53-mugwj sdk	asks: E94 done, E141 (the four checks only Jake can do)
08:01	f041bac-mugyxs82	E143: the forest cut back for hunting (1,666 → 962 trees) + the phone knobs
08:22	04f7f4b-mugzt5yj	the on-device perf probe (fps pill ▶ RUN PROBE)
08:40	33554ce-muh0fcot	dynamic resolution, point-light skip, foliage front-to-back
09:11	7007082-muh1h8z6	dynamic resolution removed (fixed 2×); the fps panel a toggle; the journal as a BAG tab
10:11	e85351c-muh3iqtg	30 at 2×: IBL refresh over 11 frames, depth slices, god rays in view only, ground-shader noise
12:59	309fe6d-muh9iq9t	Mott the trader re-rolled as a man
13:03	8e5e308-muh9nr69	the fps panel answers CPU or GPU: update / render / gpu~, REC 30 S + COPY
13:12	6dcd57c-muha27rq	the fps panel's CLOSE ×
13:19	9210415-muhab7ru	the fps pill inside the panel header
14:06	e93c0c4-muhbzds1	the fight fixes: no infinite CSS pulse, no per-frame DOM writes, frozen bones skipped
14:24	eea2650-muhcmzhd	E142 wrapped as good enough; F-P6 queued
21:29	a7652ad-muhrtp7s	follow-up plan: F-J3 and F-J4 ticked

The magic

WHY A SHARD REMASTER FIT IN A DAY, AND WHAT THE PHONE TAUGHT IT

- 1. **Ask everything up front, in waves, and let the answers be “no”.** Twenty-eight questions in fourteen minutes, answered with a thumb, fixed the scope before a line of code: no wolves, no melee, no currency, no storms, no lore notes. Each no deleted a lane.
- 2. **“Whichever we can implement in game.”** Jake handed two art picks back with that one rule, and it chose every model after: plates over moss, a hat over hair, a beard over a mouth, three lanterns instead of twelve. The concept that survives the pipeline beats the prettier one.
- 3. **Reuse pipelines, never shading.** Pine Hollow kept its photoreal look (“each shard has its own graphics style”) and borrowed only machinery: Nalati’s rigged creatures and boss/elite code (ported word for word so the merge would be clean), Driftwood’s clock, LUT fit and painted horizon, the shared Blender and image-to-3D tools.
- 4. **Every board is A = new, B = today, and A is already on.** Picks cost Jake one line (“Trees A”, “Crag cave keep”) and never blocked the build. When four boards piled up, they went out again together and came back in under a minute.
- 5. **Work around the blocker, don’t wait for it.** With Nalati not on main, the free slots took the map, the light, the journal and the water, then the Nalati pieces were ported so the rest could start. Five agents on disjoint files and one integrator that owned the plan, the merges and main.
- 6. **Headless is not the phone.** Every lane measured 30 fps on a 4× throttled CPU, and the iPhone did 14, because it is GPU-bound on stacked foliage at 2×. The look loop had chased the targets by adding trees, the opposite of what hunting needs. The fix was to measure the GPU, then give the phone a panel that says CPU or GPU in one screenshot.
- 7. **No hacks to hit the number.** “Dynamic resolution is a complete bullshit hack.” It came out within the hour, and the 30 came from real cuts that leave the picture identical: a 2-second IBL stutter spread over 11 frames, a depth copy removed, and an infinite CSS pulse that iOS was compositing 120 times a second.
- 8. **Know when to stop.** “Fix it or tell me it’s good enough and we wrap it.” Calm play holds 30 at 2× with 26 ms to spare. The unproven fight check became a follow-up row that asks nothing of the player.

Appendix – the decision ledger

JAKE’S PICKS PH-U1...U35, FROM THE ARCHIVED PLAN (PH-U6 WAS FOLDED INTO U7)

#	DECISION
PH-U1	Look: photoreal PBR. Each shard has its own style. The toon, painterly and "storybook" directions were declined.
PH-U2	Map D: the bowl + creek / waterfall into the pond + old-growth (the King's clearing) + the crag ridge with a fire-lookout tower and zipline + a bear cave + the mill hamlet (south).
PH-U3	Story: both. The ranger's <i>Warden's Hollow</i> lantern quest → the Antler King → dawn, plus the lodge contract board.
PH-U4	Name: Pine Hollow (unchanged).
PH-U5	Rifle: a lever-action hunting rifle replaces the AR-15 (same pickup, Old Ironhide's skin slot).
PH-U7	Time: the full cycle. 20 + 4 min, dawn / day / golden hour / night, like Driftwood, in photoreal.
PH-U8	Weather: dawn ground fog + rain. No thunderstorms or snow: Jake's final answer narrowed an earlier "incl. storms".
PH-U9	No wolves, no fishing. The King's thralls replace wolves: moss-grown, glassy-eyed elk and boar he calls from the fog. They are phase-II adds and roam the old-growth at night.
PH-U10	The hunt's systems: the trophy wall + the hunter's journal. No tracking, calls or tree stands. The journal is a generic engine Compendium (entries, discovered / taken, stats, a 3D viewer slot), filled with data per shard. Pine Hollow skins it as a leather hunter's journal.
PH-U11	Creatures: generated + rigged (Nalati's pipeline, PBR textures, rarity as coats). Procedural stays as the fallback.
PH-U12	Music: keep theme 1 (pine calm / tension) + add calm-night, the Antler King's boss track (3 phase stems) and the dawn sting.
PH-U13	Elites (4): Old Ironhide (boar), the Ghost Stag, Old Blackpaw (bear), the Imperial Bull (elk).
PH-U14	The hamlet: the hunting lodge's contract board + a trader + the miller (a side errand).
PH-U15	Ranged only. Crossbow, lever-action, and the Warden's Longbow (the King's drop). No melee.
PH-U16	No currency. The trader swaps items for items (hides / antlers / resin → special bolts, cartridges, cosmetics); contracts pay in trophies and skins.
PH-U17	Trees: a Blender-built photoreal species set. Hero Scots pine, old-growth fir / cedar, birch, dead snags, saplings; baked into the existing card + impostor LOD.
PH-U18	Budgets: the phone at a steady locked 30 fps; load about 30 MB. Desktop 60 fps, ≤ 300 calls.
PH-U19	Title deck: Driftwood stays first.

PH-U20	Tone: eerie folklore. Fog, lantern light, glassy-eyed thralls, the King an ancient guardian gone wrong. Unsettling, not gory; cleansed at dawn.
PH-U21	Contracts: a rotating set of 3. Finishing one draws the next. No real-time clock; works offline.
PH-U22	Collectibles: ~30 amber resin drops, 8 carved wooden tokens, the secrets (the vista bench, a hollow-log passage, the canoe to the islet). No lore notes.
PH-U23	NPCs: text dialogue + short generated voice barks (the SFX engines). No full voice acting.
PH-U24	Priority: a parallel track, equal with Driftwood V2 / HUD / physics polish / Nalati Phase D.
PH-U25	Lever-action = A, the Blender model (2026-09-25, board <code>art/pine-hollow/round-15-rifle/board.jpg</code>): case-hardened receiver, oiled walnut, worn bluing; <code>?rifle=proc</code> keeps the code-built one for captures.
PH-U26	Load: ~34 MB is fine (2026-09-25, Jake: "34 MB is fine"), superseding PH-U18's ~30 MB: the Pine Hollow phone rows in <code>bench.budget.json</code> are 35 MB transfer / 40 s cold 4G.
PH-U27	Trees = A, the Blender species set (2026-09-25, <code>art/pine-hollow/round-12-trees/board.jpg</code>); the Hollow's tree density goes up (it read thinner and park-like against B). <code>?trees=v1</code> keeps today's pines for captures.
PH-U28	Water = A, the new pond (2026-09-25, <code>art/pine-hollow/round-7-water/board.jpg</code>): the sky + skyline probe, no second scene render; <code>?pond=planar</code> keeps the before.
PH-U29	Horizon = A, the painted 360° far country (2026-09-25, <code>art/pine-hollow/round-10-horizon/board.jpg</code>), day + night; <code>?horizon=rings</code> keeps the 17 Sep rings for captures.
PH-U30	Weather = A, dawn fog + rain showers (2026-09-25, <code>art/pine-hollow/round-11-weather/board.jpg</code>); <code>?weather=clear</code> keeps the before for captures.
PH-U31	Crags + cave = A, keep (2026-09-25, <code>art/pine-hollow/round-13-crags-cave/board.jpg</code>): the granite face skin + crag kit + the bear cave; <code>?crags=v1</code> keeps the smooth slopes for captures.
PH-U32	Finish sooner (2026-09-25): 5 build agents in parallel (was 3). Moved to a follow-up plan after the merge (not built in this remaster): PH-P5 WebGPU, PH-0.2 the per-shard code split, PH-B1 the whole-map Blender pass, PH-B5 / B6 the CC0 kit + cabin lift → <code>docs/plans/PINE-HOLLOW-FOLLOWUPS.md</code> (draft; Jake approved none).
PH-U33	Load: accept ~36 MB (2026-09-25): every music style stays at the loading bar (E44, offline style switching); the transfer row is 37 MiB (measured 36.01 MiB).
PH-U34	Look signed off (2026-09-25, Jake: "look is fine for now"): look loop round 3 (<code>art/pine-hollow/round-17-look-loop-3/</code>) at all six zones, with the LUT, the boreal ground and the grade layer; <code>?ground=v1</code> / <code>?grade=v1</code> / <code>?noLut</code> keep the before.
PH-U35	Render fix = A (2026-09-25, Jake: "if A is best, just do A"; <code>art/pine-hollow/round-16-render-fix/board.jpg</code>): the post chain reads the world's depth — world AO on desktop, fog and god rays stop at walls, on every shard; <code>?aofix=0</code> keeps the before for captures.

The asks filed after the merge

#	ASK	STATUS
E94	Pine Hollow's forest pops on the phone, the same way Driftwood's did	done: <code>cbbd51c</code> (LOD swap at 80 m, where shadows end), landed with the remaster
E141	The four checks only Jake can do: an iPhone 30 fps reading, a listen, Mott's voice, the app icon	needs you: Mott re-rolled (<code>309fe6d</code>), the cabin icon kept; the reading and the listen left (F-J1, F-J2)
E142	Pine Hollow on Jake's iPhone runs at 14 fps / 71 ms (target: a steady 30)	done, wrapped: calm 30 at 2x, the fight fixes live but unconfirmed (F-P6); dynamic resolution removed
E143	The forest is too dense: "green, green, green foliage"	done: <code>a4afbe53</code> , trees 1,666 → 962, shrubs 18k → 3.75k
